PROFESSIONAL PROFILE

Full-Stack Solutions Developer | Java & React Ecosystem

Specialist in the design and deployment of modular architectures under the KirinScript brand. I offer the capacity to transform complex processes into functional tools across both web and desktop environments. My focus is on building secure infrastructures, real-time data persistence, and "Hot-Swap" logic for true scalability. I possess a strong technical problem-solving capacity, forged in industrial process engineering and refined through modern software development.

TECHNICAL SKILLS

- **Backend:** Robust development in **Java (17/21)** with **Spring Boot**. Design of REST APIs, authentication services, and complex business logic. Maven, PHP (Basic), Vercel Functions (Node.js).
- **Frontend:** Dynamic, high-performance interfaces using **React (Vite)**, prioritizing ad-hoc design and fluid User Experience (UX). JavaScript (ES6+), HTML5, CSS3.
- **Persistence & Security:** Implementation of relational databases (**MySQL**) and cloud solutions (**Firebase Firestore/Auth**), Vercel Hosting.
- **Deployment & Operation:** Management of deployments on Vercel and Firebase, code versioning with Git/GitHub, and task automation through scripting.
- **Versatility:** Ability to develop and deploy applications across both web environments and desktop solutions, leveraging the full potential of the Java ecosystem.

FEATURED PROJECTS

KirinScript | Full Stack Ecosystem | <https://kirinscript.web.app>

A comprehensive ecosystem built with React (Vite) and Java (Spring Boot) under a high-availability modular architecture. It implements advanced security via Vercel Serverless Functions and real-time persistence with Firebase. The system centralizes management tools (Admin Panel), external API integrations (YouTube, Finance), and immutable service protocols, designed to scale as an on-demand solutions platform.

WORK EXPERIENCE

DS Soportes | Lead Production & Process Optimization | Mar 2015 – Nov 2024

- **Technical Leadership:** Directed the production line, applying engineering logic to resolve critical operational bottlenecks.
- **Process Innovation:** Created technical methods to accelerate urgent delivery cycles, demonstrating an inventive capacity applicable to algorithm development and software optimization.

EDUCATION & CERTIFICATIONS

Self-Taught Software Development | 2025 – Present

- Intensive focus on the Java ecosystem (17/21) with Spring Boot and modern Frontend with React.

Technical Certifications (Educentro) | 2015 – 2024

- PC & Network Repair | Windows Server 2003.
- Visual Basic .Net & 6.0 | PHP & MySQL.

Electronics Technician | EET N°1 Luis Piedra Buena | 2005 – 2010

LANGUAGES

- **Spanish:** Native.
- **English:** Asynchronous (100% written communication & technical documentation).
